

The new AI Economy

Two types of Technology at the same time

Single Purpose Tool

General Purpose Technology

Not just an invention, but a new economy

The “Tech Stack” for the Printing Press

Writers and readers

Publishers, booksellers

Bookbinders

Newspapers, newsletters, organizations

Ink

Paper

Type foundries, punch setters

Printing press

The printing press created a new economy

Users

Electrical power + connectivity

Every economic sector is putting AI to work

Shares of companies mentions AI on Russell 3000 earnings calls

A photograph of a server room with blue racks and yellow cables. The racks are filled with equipment, and the cables are bundled together. The lighting is blue and yellow.

Requiring enormous investments
in new AI infrastructure

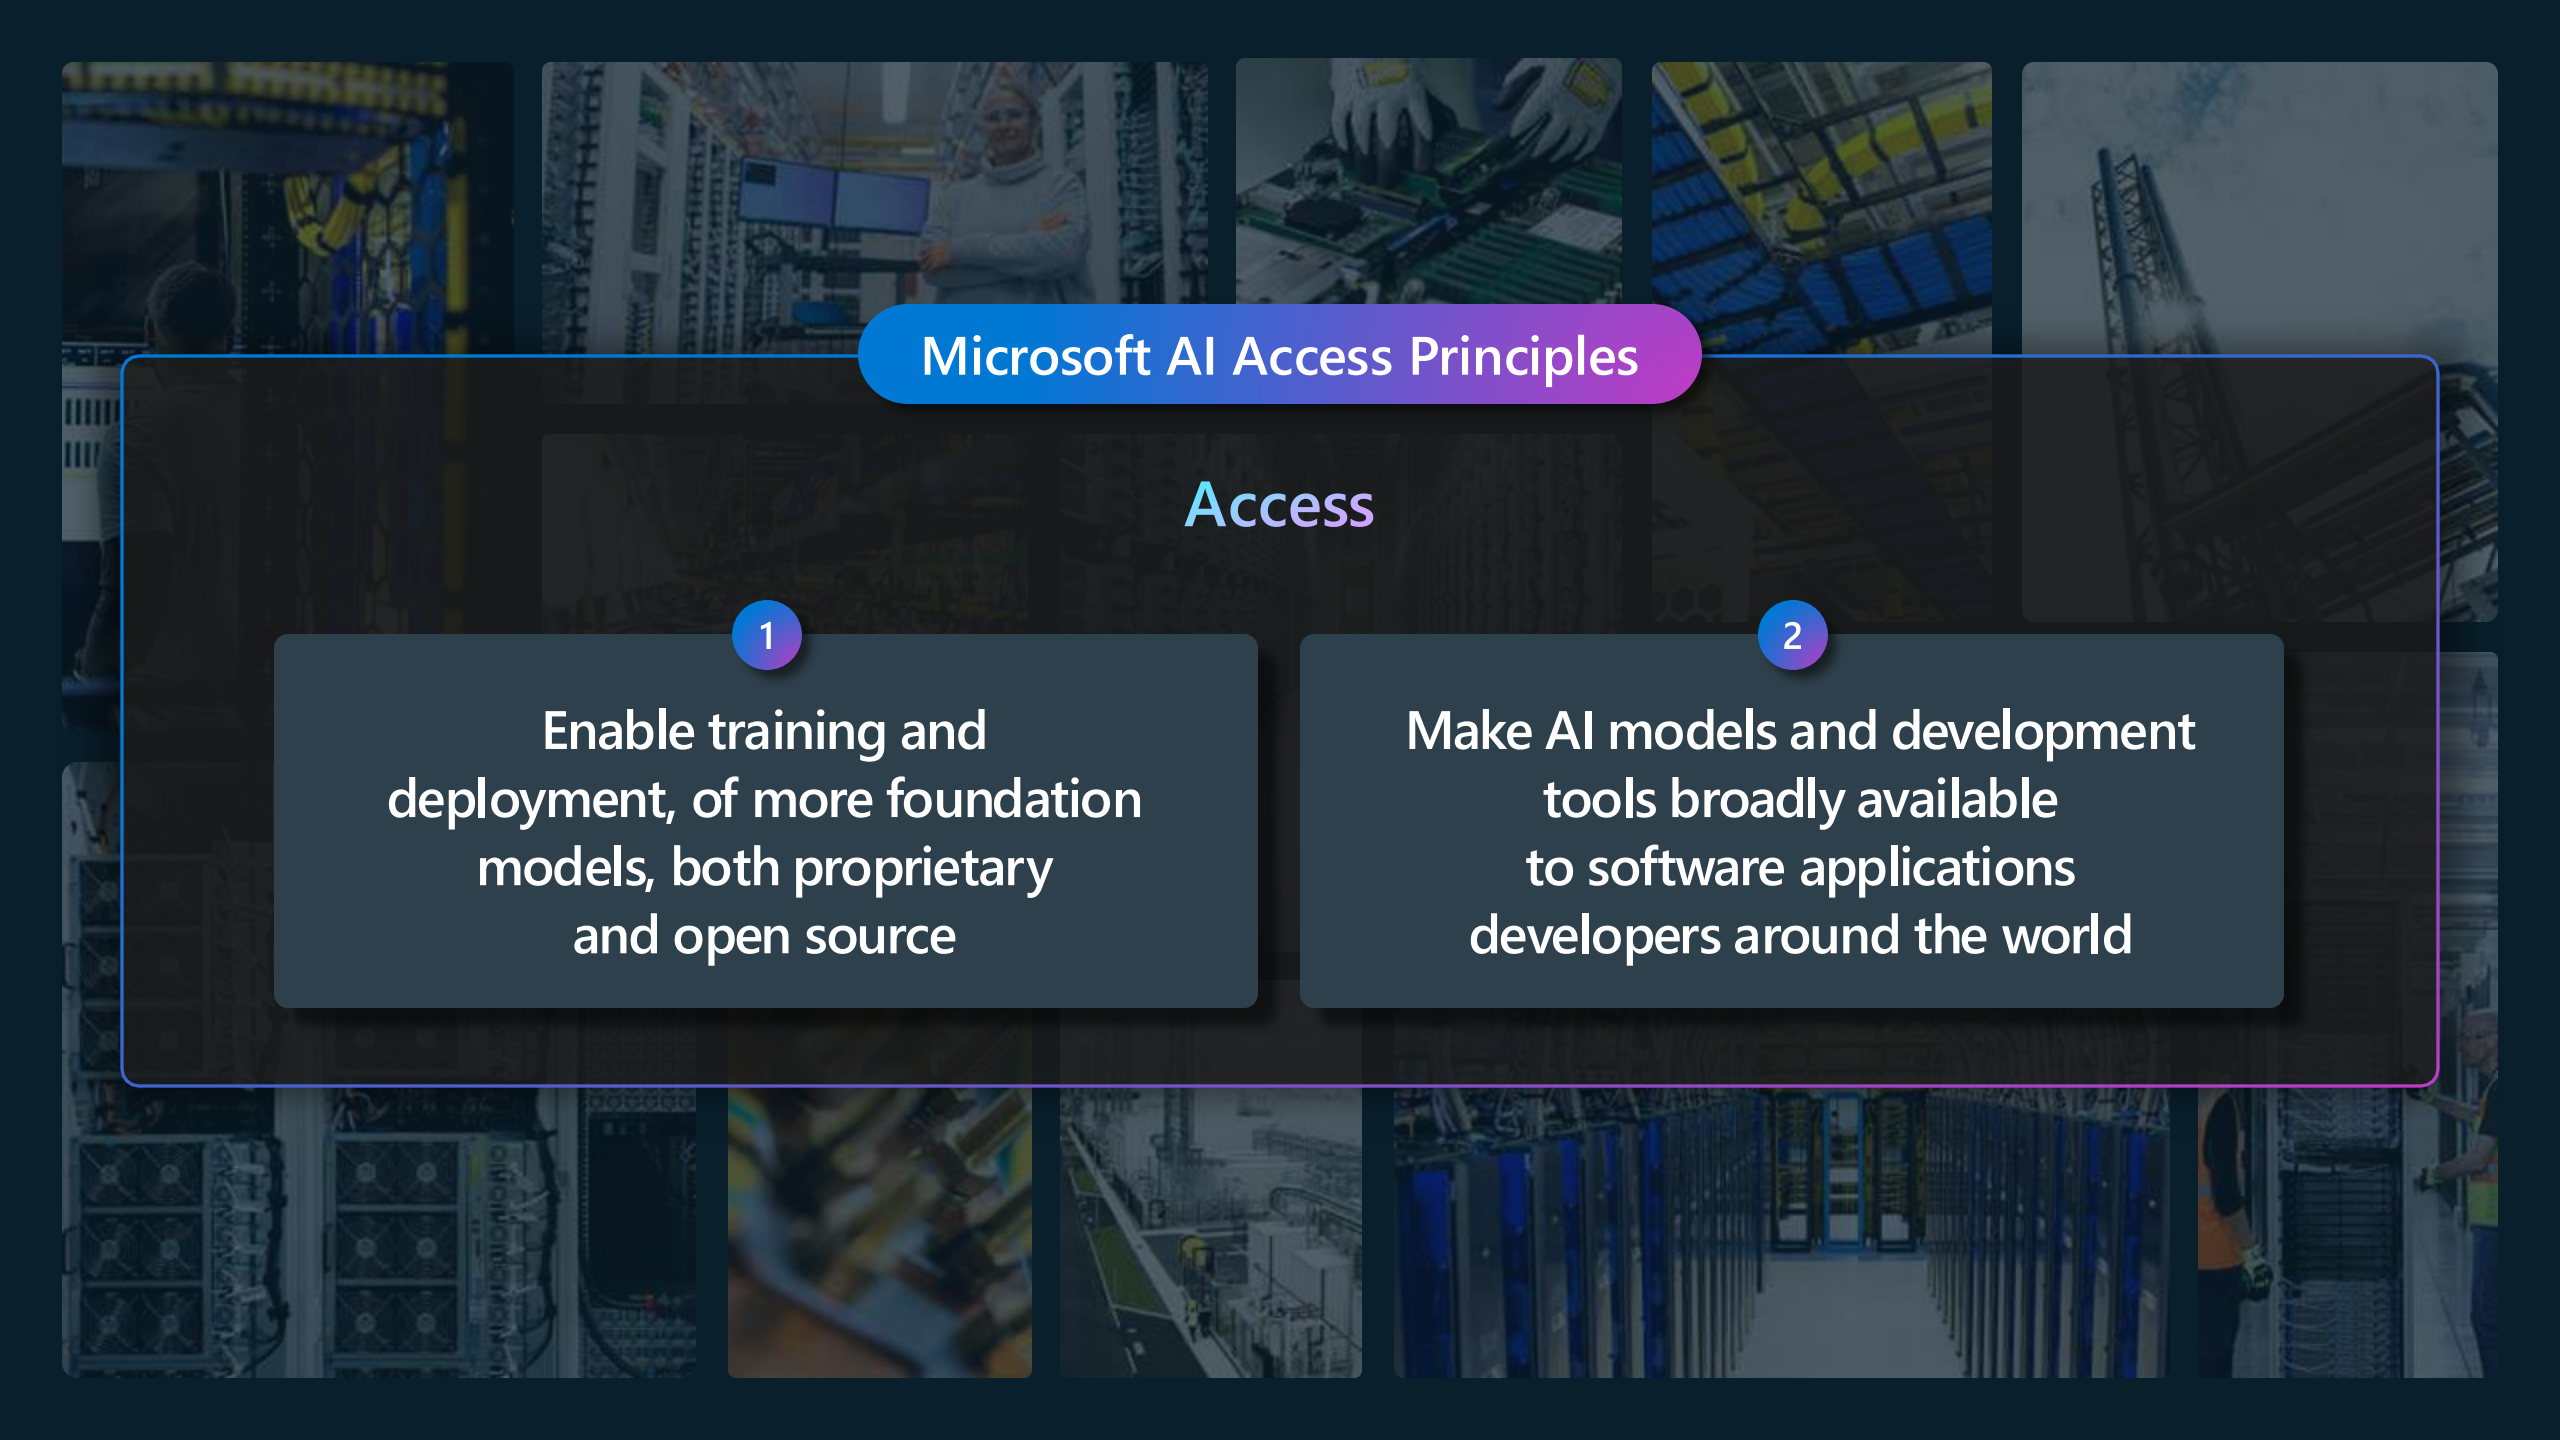

Ensure infrastructure is
accessible and run fairly

An overhead view of three people working at a long white desk. A man in a light blue shirt is leaning over the desk, pointing at a computer monitor. Two other people are seated at the desk, their hands on keyboards. The desk is equipped with multiple computer monitors, keyboards, mousepads, and some personal items like coffee cups and a notebook. Large windows are visible in the background, letting in natural light.

With a commitment to address
societal needs and responsibilities

Microsoft AI Access Principles

Microsoft AI Access Principles

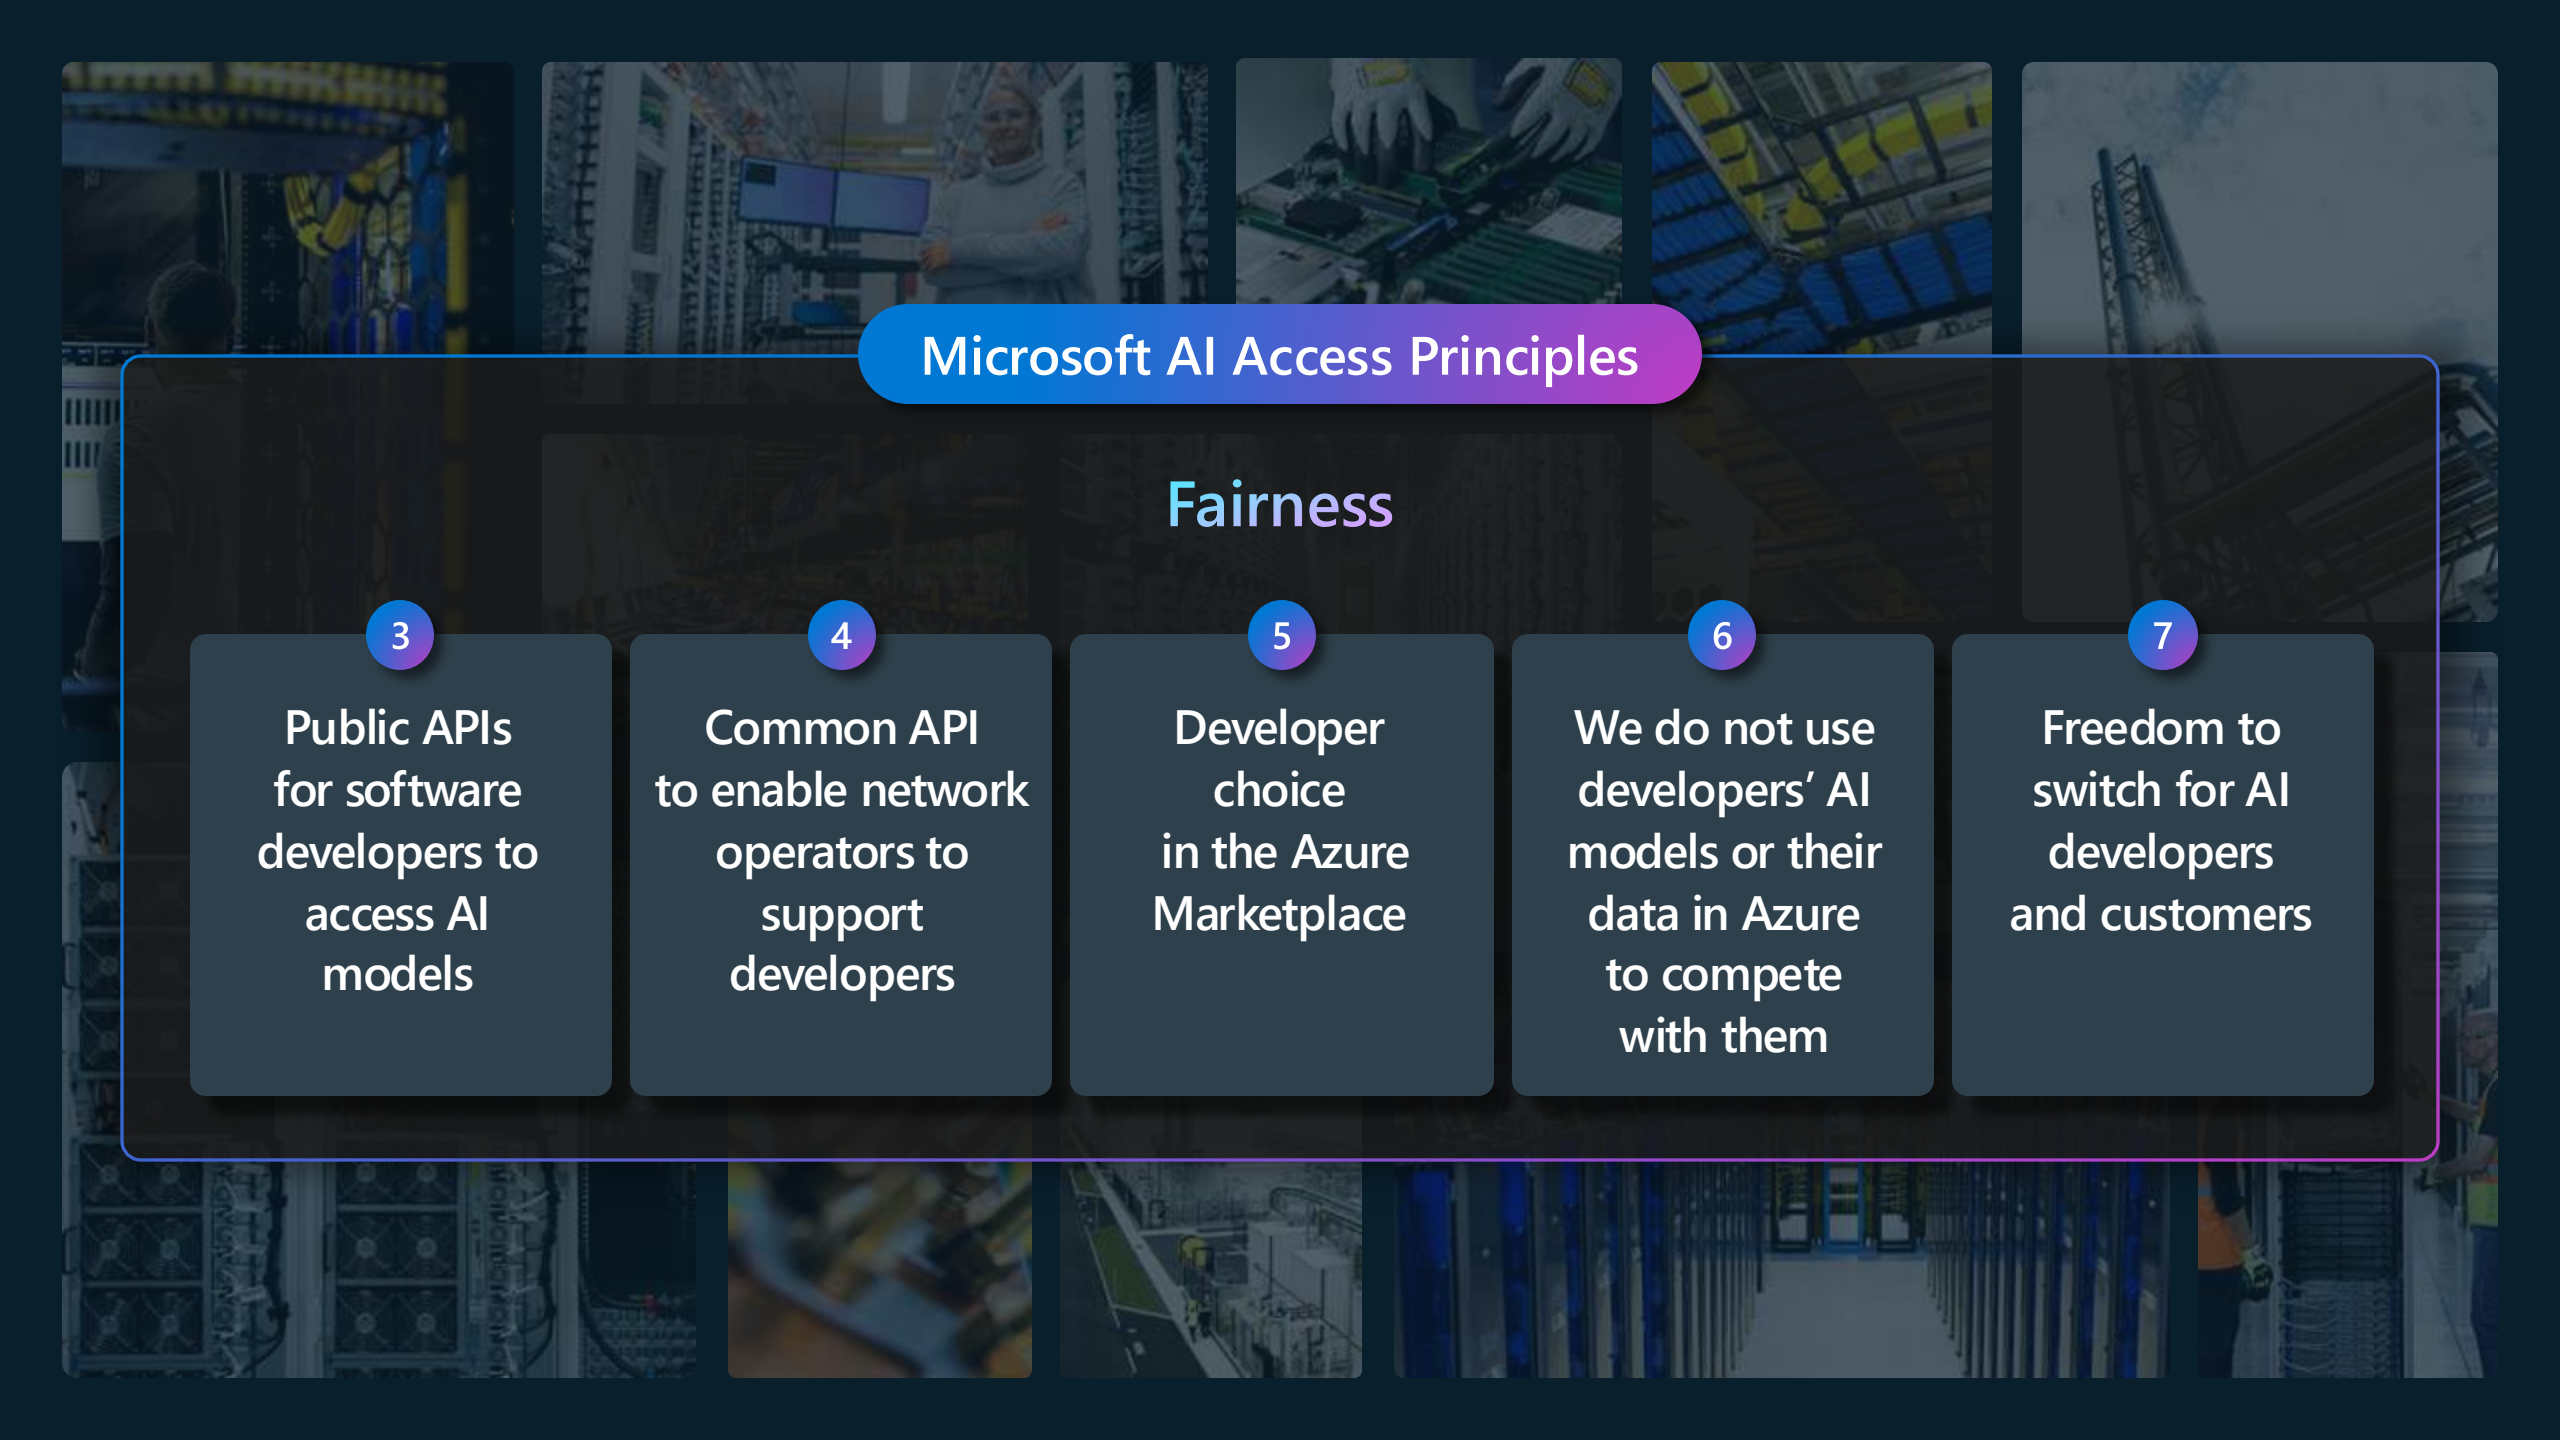

Access

1

Enable training and deployment, of more foundation models, both proprietary and open source

2

Make AI models and development tools broadly available to software applications developers around the world

Microsoft AI Access Principles

Fairness

3

Public APIs
for software
developers to
access AI
models

4

Common API
to enable network
operators to
support
developers

5

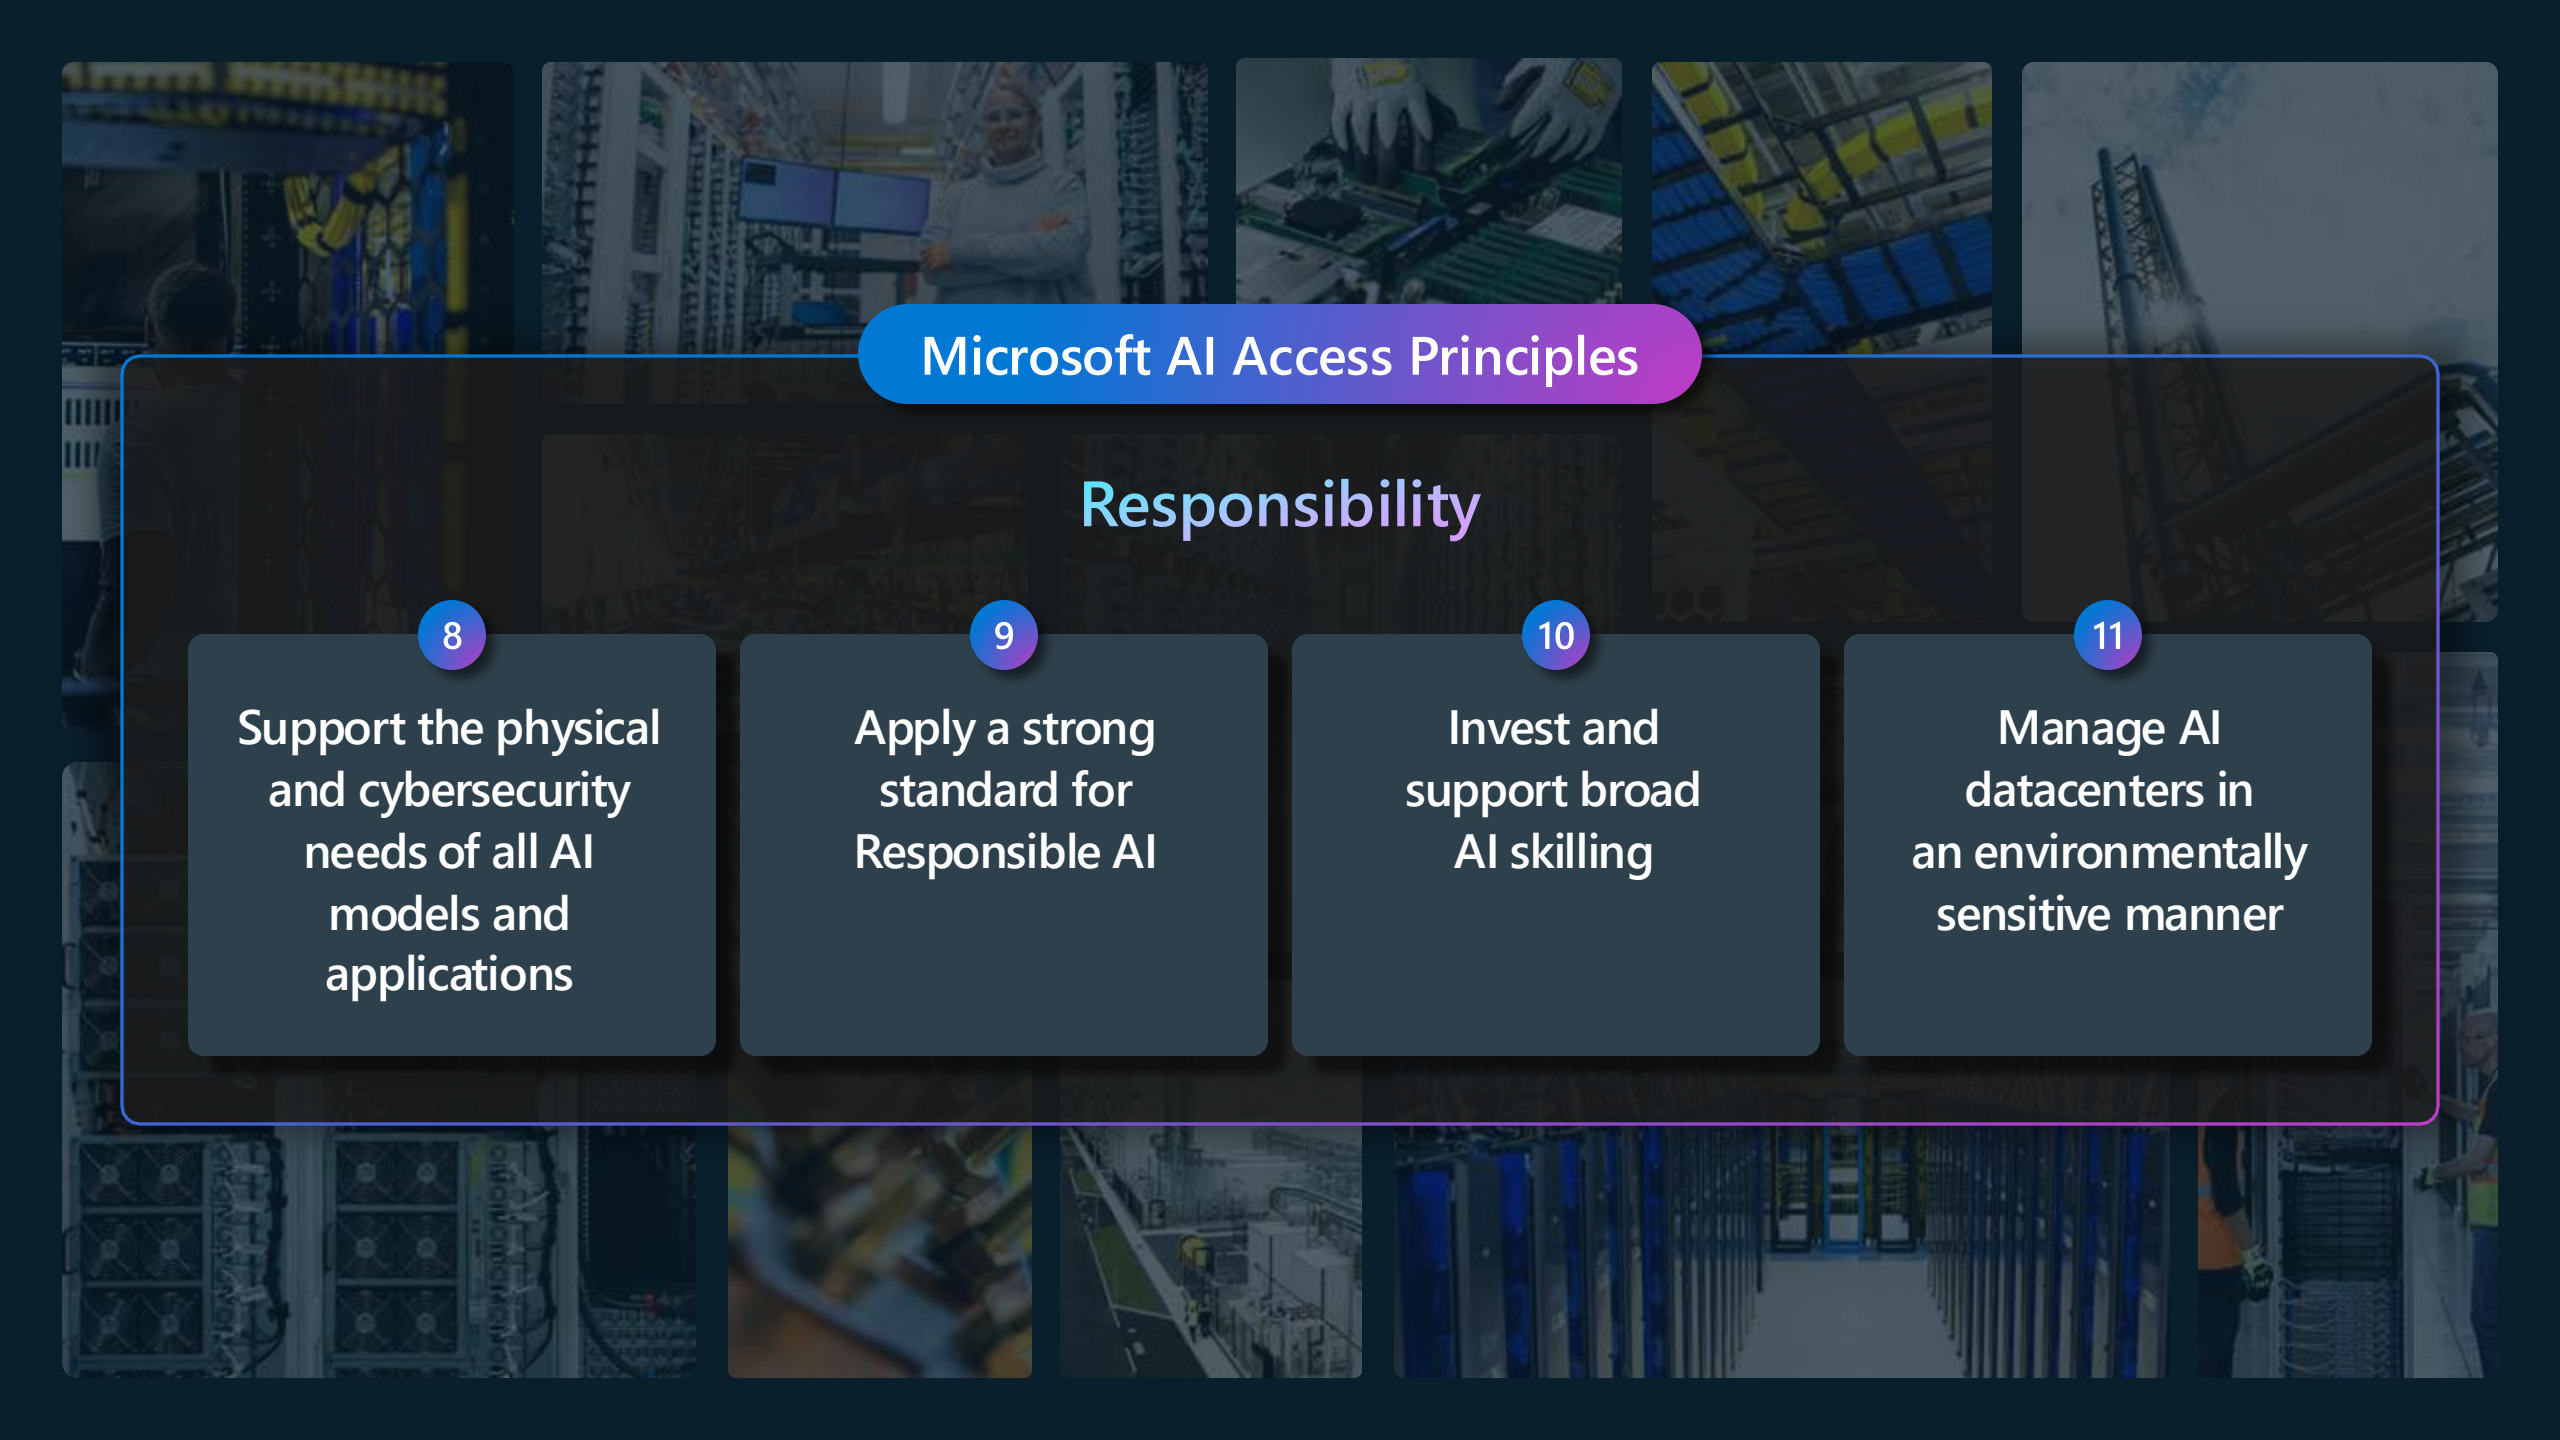

Developer
choice
in the Azure
Marketplace

6

We do not use
developers' AI
models or their
data in Azure
to compete
with them

7

Freedom to
switch for AI
developers
and customers

Microsoft AI Access Principles

Responsibility

8

Support the physical and cybersecurity needs of all AI models and applications

9

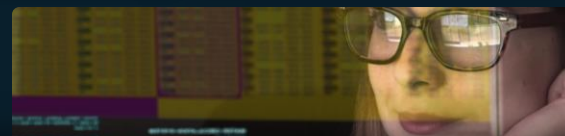

Apply a strong standard for Responsible AI

10

Invest and support broad AI skilling

11

Manage AI datacenters in an environmentally sensitive manner

Skilling at scale

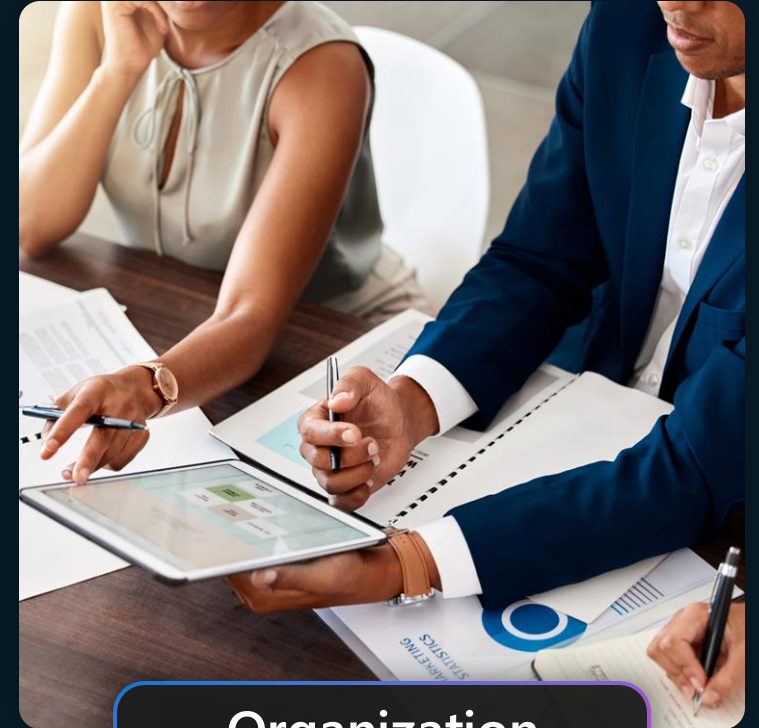

A three-part focus

User skills

Developer skills

Organization
leadership skills

Trust

Security

Privacy

Responsible AI

Digital Safety

It should not simply be left to Tech
Companies to “do the right thing”

The background is a vibrant blue with dynamic, glowing white and light blue lines that swirl and flow across the frame, creating a sense of motion and energy. In the lower-left corner, a wooden gavel with a silver band is positioned diagonally, resting on a dark surface. The text is centered within a dark, rounded rectangular box that has a thin purple border.

**We need flexible and fair
competition rules to govern AI**

Governance for trust in an AI economy
